

25COA256 – Object Oriented Programming

NotCompleted.pdf outlines list of functionalities that have not been implemented or have been implemented but are not functioning as expected in the OOP coursework. The following below highlights the list of such functionalities. Please follow the key below.

Implementation Status

Implemented	
Partially implemented/not functioning correctly	
Not implemented	

Admin Functionalities

Functionalities that have been implemented for the admin user

Functionality:	Status:	Reasons:
View all products along with all their attributes, sorted descending by unit price.		N/A: Functionality implemented
Add a product to the existing stock		N/A: Functionality implemented

Customer Functionalities

Functionalities that have been implemented for the customer user

Functionality:	Status:	Reasons:
View all available products along with their attributes, excluding the purchase cost , sorted descending by unit price.		N/A: Functionality implemented
Add products to their shopping basket		N/A: Functionality implemented
View the contents of their shopping basket		N/A: Functionality implemented
Cancel their shopping basket which empties out the entire content of the basket		N/A: Functionality implemented

Complete the payment of all items in the basket by selecting one of the available payment methods. The pay function must update the stock, make the basket empty, and generate a receipt on the screen based on the selected payment method.

Functionality:	Status:	Reasons:
PayPal Payment, requiring the entry of the customer's PayPal email address		N/A: Functionality implemented
Credit Card Payment, requiring the entry of a 6-digit card number and 3-digit CVV*.		N/A: Functionality implemented
Generate receipt** and clear basket upon purchase.		N/A: Functionality implemented

*3-digit security code.

**Receipt includes total amount, email/credit card details, today, and user's billing address.

Search/filter all available products in the stock using the following options and view the results (all product details except the purchase cost must be displayed):

Functionality:	Status:	Reasons:
Fast search/look-up for a given Product ID		N/A: Functionality implemented
Search/Filter accessories based on compatibility. Filter should return all products for which their compatibility contains the user input		N/A: Functionality implemented
